Subject: Application for Internship – Full-Stack Developer

Dear Hiring Manager,

I am writing to express my interest in an internship opportunity as a Full-Stack Developer at your organization. I am a Computer Science and Engineering student at the University of Information Technology and Sciences (UITS), and I am available for a full-time internship where I can apply my skills to real-world projects and continue growing as a developer.

I have hands-on experience building full-stack web and mobile applications using Python, Go, Django REST Framework, React, React Native, and PostgreSQL. My work spans the entire development cycle — designing databases, building REST APIs, integrating frontend interfaces, and deploying finished products — rather than just writing isolated pieces of code. I also have experience with IoT and embedded systems using ESP32 and Arduino, which has strengthened my understanding of how software and hardware components communicate and work together.

A few projects that reflect this experience: CarbonLens, a carbon-emissions tracker built with Django REST Framework, React, and PostgreSQL; StockFlow, a shop management and profit-tracking system connecting a Django REST Framework backend to a React Native app; PropNest, a property listing platform built with Go and React; and Soul Shield, a habit-tracking app with a shared Go backend serving both React web and React Native mobile clients. Alongside this project work, I have solved 700+ problems across Codeforces, LeetCode, and CodeChef, which has sharpened my problem-solving and debugging skills.

I am a quick learner, comfortable picking up new tools and technologies as a project requires, and I enjoy understanding a project as a whole rather than just completing assigned tasks in isolation. I would welcome the opportunity to bring this mindset to your team as an intern and to grow into a long-term contributor.

I have attached my CV and GitHub portfolio for your review, and I would be glad to discuss my background further at your convenience.

Thank you for your time and consideration.

Sincerely,

Farhan Nadim

FARHAN NADIM

B.Sc. in Computer Science & Engineering | Full Stack Developer

Bhuighar, Narayanganj, Bangladesh | 01403527730 (Whatsapp) | farhannadim2023@gmail.com | [GitHub](#) | [Linkedin](#) | [Portfolio](#)

TECHNICAL SKILLS

Programing Languages

Python, Go, JavaScript

Backend

Django, Django REST Framework, REST API Development

Frontend

React, React Native, HTML, CSS, JavaScript

Database

PostgreSQL, SQL, Neon, Supabase

Tools & Platforms

Git, GitHub, VS Code, Vercel, Render, Netlify

Embedded / IoT

ESP32, Arduino Uno, Sensors, Microcontrollers, Embedded Logic

Other

API Integration, Database Design, Problem Solving

EDUCATION

University of Information Technology and Sciences (UITS)

B.Sc. in Computer Science & Engineering

Expected Graduation: 2027

CGPA: 3.42 / 4.00

PROBLEM SOLVING

600+ problems solved across Codeforces, LeetCode, and CodeChef. Strong interest in algorithms, data structures, and competitive programming.

Codeforces: _Farhan_Nadim

LeetCode: APTfcgMQdE

CodeChef: farhan_nadim (2★)

HOBBIES

Building IoT projects — connecting microcontrollers, sensors, and code to build systems that sense, react, and communicate with each other.

ADDITIONAL INFO

English: Basic

Availability: Full-Time

Dream Career: Software Engineer

PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on experience in full-stack development using Python, Go, Django REST Framework, React, and PostgreSQL. Strong in REST APIs, databases, and problem-solving, with 600+ problems solved on Codeforces, LeetCode, and CodeChef. Seeking an internship to contribute to real-world projects.

FULL-STACK & SOFTWARE PROJECTS

PropNest

Go | React

GitHub: github.com/Farhan0140/PropNest

- Built a property listing and management platform for browsing and managing real estate listings.
- Developed the backend in Go and the frontend in React, connected end-to-end via REST APIs.

Soul Shield

Go | React | React Native

GitHub: github.com/Farhan0140/_Soul_Shield

- Built a habit-tracking app that helps users build and keep daily routines — dhikr, prayers, reading, or any recurring habit.
- Implemented streak tracking, custom reward messages, and reminder notifications on a single Go backend serving two clients (React web and React Native mobile).

CarbonLens

Django REST Framework | React | PostgreSQL

GitHub: github.com/Farhan0140/CarbonLens

- Developed a full-stack application that tracks users' daily carbon emissions and helps them understand their environmental impact.
- Implemented the backend using Django REST Framework and designed RESTful APIs for application functionality.
- Integrated PostgreSQL for persistent data storage and connected the backend with the React frontend.

StockFlow — Shop Management & Profit Tracker System

Django REST Framework | React Native | PostgreSQL

GitHub: github.com/Farhan0140/StockFlow

- Developed a shop management and profit tracking system for managing business operations and financial information.
- Built backend functionality and REST APIs using Django REST Framework, with a PostgreSQL database and a React Native client.

IOT & EMBEDDED SYSTEMS PROJECTS

SmartStep — Footstep Energy Harvesting & Automatic Street Lighting System

ESP32 | Piezoelectric Sensor | Voltage Sensor | I2C LCD | LDR | Relay

- Built a renewable-energy system that generates electricity from human footsteps and uses it to power street lights automatically.

SmartBaby — IoT-Based Baby Monitoring & Safety System

ESP32 Dev Module | ESP32-C3 Mini | Relay Module | Temperature Sensor | Gas Sensor

- Built an IoT system that continuously monitors a baby's environment and provides automatic protection and real-time alerts to the mother.

Smartshield Himaghar — Cold Storage Monitoring & Safety System

Arduino Uno | LCD Display | Temperature & Gas Sensors | PIR Motion Sensor | SIM800L GSM Module | Relay

- Built a smart monitoring and safety system for cold storage/refrigerated warehouses that tracks temperature, gas levels, motion, and door status to protect stored products.

SmartDesk — IoT-Based Smart Table Management System

ESP32 | Ultrasonic Sensor | OLED Display | Temperature Sensor | LDR Module

- Built a smart desk system that automatically controls and monitors devices on a study/work table, such as a laptop, cooling fan, and table lamp.
